DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1, 13, and 25 in the reply filed on 8/11/05 is acknowledged.
2. Claims 2-12, 14-24, and 26-38 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 8/11/05.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Objections

4. Claim 25 is objected to because of the following informalities: line 1, "encoding" should be changed to --decoding--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1, 13, and 25 are rejected under 35 U.S.C. 102(a) as being anticipated by Toshiyuki et al (JP 2001-204029).

Toshiyuki et al discloses the same noise detection method in an encoder and decoder for at least one of encoding and decoding an image as specified in claims 1, 13, and 25 of the present invention, comprising identifying adjacent regions in the image (see Abstract Problem); identifying coding parameters for the adjacent regions (see Abstract Solution); identifying transform coefficients DCT for the adjacent regions; identifying DC components and AC components in the transform coefficients [0080]; and selectively filtering at least a portion of the regions proximate the boundary between the adjacent regions wherein the selectively filtering is based upon a similarity of the DC components and the AC components [0081].
